PREFACE

This edition of the annual Behavioral Risk Factor Surveillance System Chicago Reference Tables has similar content and organization as the 2003 edition but includes some additional variables focused on family planning and environmental factors. We hope this report will prove helpful in developing effective interventions for improving the health and well-being of Chicagoans. We welcome any questions, comments, or suggestions for improvements. Please contact:

CONTENTS

WHAT IS THE BRFSS?

The Behavioral Risk Factor Surveillance System (BRFSS) is a collaboration between the U.S. Centers for Disease Control and Prevention (CDC) and state health departments. This system was designed to gather locally relevant information on health related behaviors related to the leading causes of death in the U.S. It has expanded to include data on the prevalence of selected health conditions, and access to health services. Each state has options for sample design and data collection within parameters set by the CDC.

SURVEY SYSTEM

The BRFSS is a telephone based survey system of non-institutionalized adults. The survey is in the field on a continual basis. A probability sample of telephone numbers is generated on a quarterly basis, and provides the sampling frame for identifying eligible households. States conduct interviews during each month in accordance with a prescribed protocol, and incorporate surveillance results into computer files. States edit and correct completed interviews each month. Data are aggregated and tabulated on an annual basis. Illinois is stratified into 5 regions: Chicago, suburban Cook County, Collar Counties, other Urban Counties, and Rural Counties. The sampling process described above is performed within each region during the data collection phase.

SURVEY INSTRUMENT

The BRFSS survey instrument is organized in a modular fashion. The five sections are:

1. Fixed Core
2. Two Rotating Cores
3. Optional Modules
4. Emerging Core
5. State-Added Questions

The fixed core is used in all states every year, the rotating cores are used in all states in an alternating fashion- one form is used for odd numbered years, the other form is used for even numbered years. The rotating cores are used in all states. Optional modules are standardized sets of questions on a wide variety of issues available for states to use based on their needs. The emerging core is used to add questions of topical interest, and to evaluate questions for potential use in future surveys. State-Added questions are unique to each jurisdiction and can be used to cover questions that are not addressed elsewhere in the survey.

WEIGHTING

The data are weighted prior to tabulation and analysis. Weighting data corrects for study design features and variation of the age/race/sex subgroups between the sample and the general population. Weighting allows inferences to be drawn about the entire adult population from the sample of interview respondents. Region-specific weights are developed post-collection. These techniques allow valid statistics to be generated for each region, in addition to statewide statistics.

Weighted frequencies are based on intercensal population estimates for 2004 developed by the Illinois Department of Public Health. As such, these frequencies may differ from population estimates for the adult Chicago population in other publications produced by the Chicago Department of Public Health.

CHICAGO ANALYSES

The data for the analyses presented in this volume are extracted from BRFSS files provided by the Illinois Department of Public Health for Chicago. Each questionnaire item was examined for non-response or non-valid response percentages. All items included in this report were found to have sufficient valid response rates for further analysis. Frequency tables with percentages were generated for each item. Percentages were based on the universe of valid responses, not the entire respondent pool. Since Chicago has a much smaller sample size than the statewide sample, responses for many items were collapsed into categories (based on literature review and local needs) to improve the validity and stability of the estimates. The response categories used in this volume may vary from other reports that use BRFSS data. Data are weighted with the appropriate local weights, except when weighting is not possible due to limited sample size.

DATA PRESENTATION

This volume is organized into sections containing related survey questions. The text for each question is presented, and the skip pattern is defined (for relevant questions). The weighted percent and frequency, and number in the sample for each response category for the question are then listed. For questions that were not asked of the entire sample, the frequencies reported will not total to the (estimated) Chicago adult population. Due to rounding, the reported frequencies for a question may not total to 100 percent. If sufficient numbers are available, responses will be stratified by gender, age, race/ethnicity, household type, marital status, and/or income, and presented in tabular form.

DEMOGRAPHICS

	NUMBER IN SAMPLE	WEIGHTED PERCENT	WEIGHTED FREQUENCY

HEALTH RISK FACTORS AND CHRONIC CONDITIONS

		COMPARE TO:	
RISK FACTOR/CHRONIC CONDITION	CHICAGO (95% CI)	ILLINOIS	UNITED STATES
General health status is poor	4.5 (2.2, 6.9)	3.7	3.9
No health care coverage	22.3 (17.9, 26.7)	14.3	14.9
Have not visited a dentist in past 12 months	36.2 (31.5, 40.9)	28.5	29.8
Not using birth control (Sexually active, heterosexual couples)	22.5 (17.5,27.5)	NA	NA
Not vaccinated against the flu virus in past 12 months	77.2 (73.7, 80.8)	70.2	NA
No colorectal cancer screening (Endoscopy, ages 50 and older)	52.9 (45.4, 60.4)	51	47
No prostate cancer screening (PSA test, males age 40 and older)	46.4 (36.3, 56.4)	42.3	47.9
Never had a mammogram (Females age 40 and older)	8.9 (4.7, 13.1)	9.9	25.4
Never had a Pap test	7.2 (3.6, 10.7)	5.4	NA
Diagnosed with diabetes	7 (4.4, 9.5)	6.1	7.1
Diagnosed with asthma	13.1 (9.9, 16.3)	13.1	13.3
Unaware treatment during pregnancy reduces fetal HIV transmission	21.2 (16.1, 26.3)	24.7	NA
Unaware medical treatments helps HIV infected persons live longer	3 (1.2, 4.8)	4.2	NA
At risk of contracting HIV or developing AIDS	7.5 (4.2, 10.8)	3.6	NA
Chronic drinking risk (2 or more drinks daily)	4.5 (2.5, 6.6)	3.8	4.9
Binge drinking risk (5 or more drinks at one time)	20.4 (16.4, 24.4)	17.5	14.9
Drinking and driving risk	2.1 (0.9, 3.3)	2.5	NA
Current smoker	27.5 (23, 31.9)	22.2	20.8
Overweight, obese or morbidly obese (BMI >= 25)	57.8 (53.2, 62.4)	59	NA
Do not participate in any physical activity	28.2 (23.7, 32.7)	24.9	NA
Firearm(s) in home	9 (6.2, 11.7)	20.7	NA
Sunburned in past 12 months	19.8 (16.3, 23.3)	NA	NA
Illness/symptoms related to poor indoor air quality in past year	23.8 (19.8, 27.9)	NA	NA
Illness/symptoms related to outdoor air pollution in past year	15.3 (11.8, 18.9)	NA	NA

Values shown are percents weighted for the appropriate population in each jurisdiction.
United States includes all 50 states, Washington D.C. and U.S. territories abroad.
NA = Data not available.

PERCEPTION OF HEALTH

Would you say that in general your health is: excellent, very good, good, fair or poor?

HAVE A DISABILITY

A calculated variable. Disability is defined as respondents who reported that they are limited in any way in any activities because of physical, mental or emotional problems OR have health problem that requires special equipment, such as a cane, a wheelchair, a special bed or a special telephone (including occasional use or use in certain circumstances). No disability is defined as respondents who reported no limitations in any way in any activities AND no health problems requiring special equipment.

BIRTH CONTROL USE

Some things people do to keep from getting pregnant include not having sex at certain times, using birth control methods such as the pill, implants, shots, condoms, diaphragm, foam, IUD, having their tubes tied or having a vasectomy. Are you or your wife/husband/ partner doing anything now to keep from getting pregnant? (If more than one partner, consider usual partner.)

For female respondents who are less than 45 or male respondents who are less than 60. Female respondents have not had a hysterectomy and were not pregnant.

REASON FOR NOT USING BIRTH CONTROL

What is the main reason for not doing anything to keep you/ your wife/your partner from getting pregnant?

For female (<45) or male (< 60) respondents who are not using some form of birth control. Female respondents have not had a hysterectomy and were not pregnant.

CROSS-TABULATION BY SELECTED DEMOGRAPHIC VARIABLES IS NOT POSSIBLE BECAUSE THERE ARE TOO FEW PERSONS WITHIN EACH RESPONSE CATEGORY.

	WEIGHTED PERCENT
DIDN'T THINK WAS GOING TO HAVE SEX/ NO REGULAR PARTNER	14.9
WANT A PREGNANCY	16.1
OTHER*	68.9

	WEIGHTED FREQUENCY
DIDN'T THINK WAS GOING TO HAVE SEX/ NO REGULAR PARTNER	35,686
WANT A PREGNANCY	38,548
OTHER*	164,839
TOTAL IN SAMPLE	74

*Other includes didn't want to use birth control, don't like birth control/fear side effects, can't pay for birth control, lapse in use of method, don't think can get pregnant, had tubes tied, a vasectomy or partner had hysterectomy, too old, currently breastfeeding, just had a baby/postpartum, other reason, don't care if get pregnant, or partner is pregnant now.

Note: If a skip pattern is not mentioned following a question, it was asked of all participants.

FEELINGS ABOUT HAVING A CHILD

How do you feel about having a child now or sometime in the future? Would you say you don't want to have one, you do want to have one or you're not sure if you do or don't?

For female respondents who are less than 45 or male respondents who are less than 60. Female respondents have not had a hysterectomy and were not pregnant. Male respondents had not had a vasectomy and their partner had neither a hysterectomy nor were pregnant. Respondents who were not sexually active or had a same sex partner were also excluded.

REASON FOR HIV TEST

I am going to read you a list of reasons why some people have been tested for HIV. Not including blood donations, which of these would you say was the MAIN reason for your last HIV test: it was required, someone suggested you should be tested, you thought you may have gotten HIV through sex or drug use, you just wanted to find out whether you had HIV, you were worried that you could give HIV to someone, you were pregnant (if female), it was done as part of a routine medical check-up, or you were tested for some other reason?

For respondents less than 65 years old who had an HIV test.

	WEIGHTED PERCENT
REQUIRED	14
SOMEONE SUGGESTED/ WANTED TO FIND OUT	32.6
THOUGHT GOTTEN HIV/WORRIED GIVING HIV SOMEONE	3.6

BODY MASS INDEX (BMI)

A calculated variable based on the following questions: About how much do you weigh without shoes? About how tall are you without shoes? Then categorized according the following guidelines:

Underweight	*< 18.5*
Normal weight	*18.5-24.9*
Overweight	*25-29.9*
Obese	*30-39.9*
Morbidly Obese	*40+*

(Example: A 5 foot tall person weighing 200 pounds has a BMI of 39.1 and is considered obese.)
